About the course

Welcome to an exciting exploration of how digital technologies are transforming learning and development in

AI Supported Course Redesign

Updating and expanding quarter based EdD course to Semester. Updating content, revising topics. Incorporated AI to simplify repetitive processes.

2.3 Current Trends in Digital Workplace Learning

Module 2

The digital workplace learning landscape is evolving rapidly. Let's explore the trends that are shaping how organizations approach learning and development in 2025. Blended learning, which combines traditional classroom instruction with online asynchronous learning, is becoming the dominant model in corporate training, enabling scalability, accessibility and personalization across remote and hybrid workforces. It supports continuous learning, upskilling and reskilling by allowing both synchronous sessions and flexible, on-demand digital modules.

Digital workplace 101: 5 trends transforming the digital workplace

Watch the following video and pay attention to how this company is pulling together top trends as a way to position their platform. Often companies do a good job synthesizing top trends within their sales process.

Select Play on the following video (04:24) to discover five key trends reshaping the digital workplace.

TeamViewer: (2025, December). Digital Workplace 101: 5 trends transforming it

2.4 AI Integration in Corporate Training

Module 2

Understanding trends is important, but it's equally critical to understand **why** organizations are investing in digital workplace learning. What problems are they trying to solve? Select each title to view more information about the different problems being solved.

- The skills gap crisis: Reskilling and upskilling
- Agility and rapid response to change
- Retention: Learning as a retention tool

The challenge:

- Technology evolves faster than traditional education can keep pace.
- Skills have a shorter "half-life" – what you learned five years ago may be outdated.
- Organizations can't always hire for new skills (talent scarcity), so they must develop them internally.

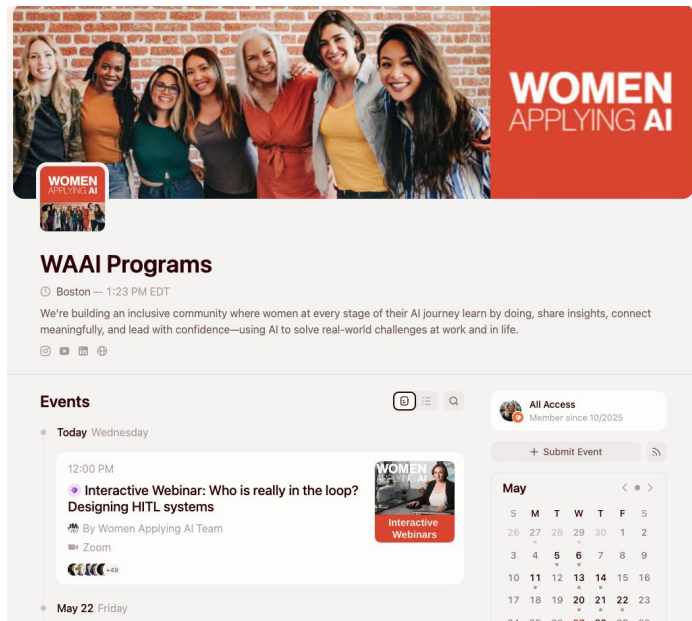

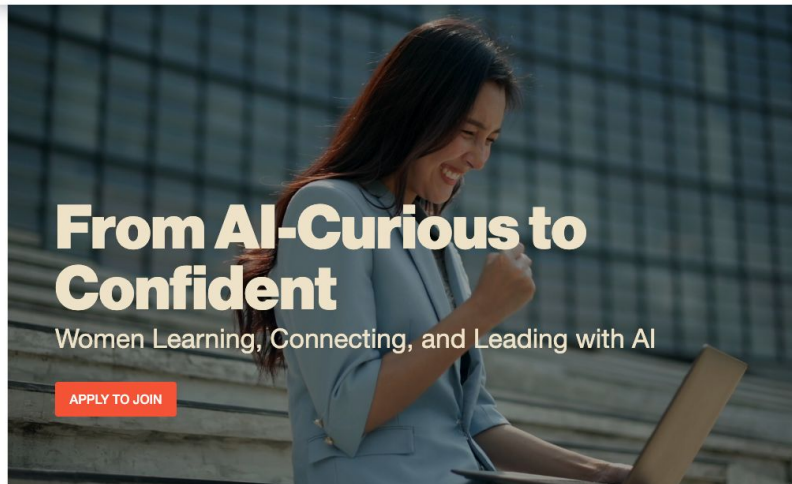

How digital learning helps:

- Scalable skill development programs
- Just-in-time learning as technology changes
- Skills tracking and gap analysis
- Pathways from current skills to needed future skills

AI Adoption

Women Applying AI

Founding Member, Program team Learning Design and Process lead. Since organization launch (Sept 2026), we've run more than 70 sessions with an all volunteer learning design team.

- Program Innovator. Speaker, and Learning Design
- Speaker Intake, Program Operations & Process Development
- Programming Calendar & Pipeline Management
- Volunteer Onboarding & Coordination
- AI Pathway Tool Evaluation

Brazelton Institute

Digital Transformation

IDEAL advisory network

THE PROBLEM

EdTech decisions were siloed across colleges, IT, and the Provost's office — no shared process for tool adoption or budget alignment.

WHO WAS IN THE ROOM

Provost's Office CIO / ITS Colleges Faculty
Acad. Technology Learning designers Instructional tech

OUTCOME

30-member global advisory network. Unblocked a year-long tool adoption stalemate within 6 months. Established shared tools dashboard and new processes for LMS integration requests.

MentorWorks credentialing

THE PROBLEM

Non-credit boot camp students needed meaningful credentials, but Registrar policies, badge frameworks, and partner expectations were misaligned — no one had a path forward.

WHO WAS IN THE ROOM

Registrar College leadership Provost's Office Faculty
Industry partner Badging committee IT / LMS team

OUTCOME

Students received digital badges and transcripts. Sponsor called the stakeholder meeting "the most efficient he'd had at Northeastern."
Formalized intake processes for all future non-credit programs.

Digital credentialing at scale

THE PROBLEM

The university had no enterprise infrastructure for skill-based credentials. A small pilot existed, but no framework, no policy, and no cross-functional ownership to scale it.

WHO WAS IN THE ROOM

Provost's Office Registrar Colleges Badging committee
IT / LMS team

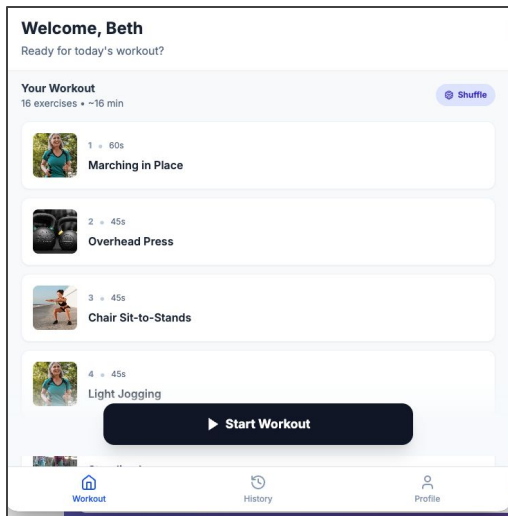

OUTCOME

Pilot grew to 9,300+ badges awarded and 200+ badges created.
Skillstack platform launched across all campuses including international locations in London and Canada.

EDU 6558 — PM Coach

A Socratic thinking partner for your LXD project. This tool asks questions — it will not write your deliverables for you.

Describe your project in 1–2 sentences

e.g., I'm designing a 4-week onboarding course for new instructional designers at a mid-size nonprofit, delivered async in our LMS with a synchronous kickoff.

Choose a coaching mode to begin

- Risk Spotter**
Surface blind spots before they become problems
- Skeptical Stakeholder**
Defend your plan to a challenging project sponsor
- PM Diagnostic**
Socratic walk-through of all PM elements for your final plan

Prototype Your Innovation

Examples for my students and for self Practice.

Week 2 In-Class Activity: Innovation Detective Championship

Business Model Teardown Game

PJM 6185: Managing Innovation Projects

Activity Overview

Students work in groups to reverse-engineer real business model canvases, identify innovations, and propose disruptions. This gamified activity bridges Week 1 Value Proposition work to Week 2 Business Model Canvas concepts while preparing students for Week 3 full business model design.

Quick Reference

- Duration: 90 minutes
- Groups: 8 total (7 Boston + 1 Virginia)
- Format: 3 competitive rounds with scoring
- Learning Objectives: BMC building blocks, customer segments, channels, innovation identification

Learning Objectives

By the end of this activity, students will be able to:

1. Identify and describe all 9 building blocks of a Business Model Canvas
2. Analyze how customer segments, channels, and relationships work together
3. Recognize innovation patterns across different business models
4. Apply Week 1 Value Proposition concepts to complete business models
5. Practice identifying business model vulnerabilities and opportunities for disruption
